

Asterix Server for Radar Video

The Asterix Server software converts and distributes raw radar videos to the Asterix CAT-240 Radar Video standard. Supporting dedicated customer requirements for advanced integrated navigation and mission systems, this format can be processed by almost any third-party application.

Main Features

- Conversion of Anschutz NSX and Terma SCANTER radar video to Asterix CAT-240
 - Distribution of high definition radar videos to end-user applications, such as oil spill detection radars, ice radars, wave radars, intrusion detection or combat management systems
 - Flexible configuration (video from any transceiver is available at any network destination)
 - Standardized hardware platform in the background (small marine computer)
 - System separation between navigation and a third-party system (for safety reasons)
- Type-approved with the following radar transceivers:**
- NautoScan NX (NSX) X-Band / S-Band navigation radars
 - Terma SCANTER 2602 / 6002 solid-state X-Band radar for high performance navigation
